# 1. Project Overview

Project name: BookRoofs – Stage 1: AI Roofing Receptionist (GHL-Centric)

Goal:

Launch a fully working AI roofing receptionist, integrated with GoHighLevel (GHL), that:

- Answers calls/chats 24/7
- Qualifies roofing leads
- Books appointments directly in GHL
- Logs everything in GHL (notes, tags, pipelines)
- Live-transfers hot leads to closers
- Produces smart notes, lead scores, and basic analytics

Final deadline:

- November 30, 2025 — v1.0 ready to sell to roofing companies

Internal milestones:

1. Nov 22 – Core features working & internally tested
2. Nov 25 – Pilot running with 2–3 friendly roofing clients
3. Nov 30 – Improvements applied, v1 packaged as a sellable offer

---

## 2. Final Capabilities – What v1 MUST Do

These are non-negotiable. Dev team must confirm each is working before Nov 30.

### 2.1 Core Receptionist Functions

1. Answer & handle inbound calls / chats
  - Greets professionally with BookRoofs or the client's brand.
  - Captures:
    - Name
    - Phone
    - Email
    - Property address
    - Basic project info (roof issue, how long, any visible damage).

---

## 2. Qualify roofing leads

- Asks key questions:
  - Type of roof / issue (leak, hail, age, missing shingles, etc.)
  - Homeowner vs tenant
  - Urgency (emergency vs planned)
  - Insurance claim vs out-of-pocket
  - Roof type (asphalt, metal, tile, flat, etc.)
  - Rough job size / scope (full replacement vs repair)
- Classifies lead as:
  - Qualified – book appointment now
  - Possible – needs follow-up
  - Not qualified – log & tag

## 3. Book appointments directly into CRM calendar (GHL)

- Reads real-time availability from GHL calendar.
- Offers 2–3 clear time slots to the caller.
- Books & confirms:
  - Date / time
  - Location
  - Assigned closer/rep (if we route by user)
- Triggers SMS + email confirmations via GHL workflows.

## 4. Log every interaction in GHL

- Creates/updates Contact.
- Adds notes (summary of conversation).
- Tags status, e.g.:
  - New Lead
  - Qualified – Appointment Booked
  - Qualified – Needs Follow-Up
  - Not Qualified
  - Spam / Vendor

## 5. Handle FAQs

- Service areas / zip codes.
- Basic pricing ranges (we define ranges, not exact quotes).
- Types of jobs (residential, possibly light commercial).
- Warranty basics.
- Insurance basics (high level).

## 6. Fail-safe / “human escape hatch”

- If AI is confused or user is upset:
    - Offer to transfer to human (if available), or
    - Create “Callback requested” task in GHL with priority tag.
-

---

## 2.2 Competitive-Edge Capabilities (Must-Haves for Differentiation)

7. Live Transfer to Closer (Hot Lead Pass-Through)
  - For high-intent calls (emergency leak, insurance claim, big roof replacement):
    - AI says: “One moment, let me transfer you to a roofing specialist.”
  - Transfer sequence:
    - Primary closer
    - Secondary closer (backup)
    - If nobody answers → book appointment + create “Missed Hot Transfer – Call Back ASAP” task.
  - Logged in GHL: transfer attempts, success/fail.
8. Instant Lead Scoring (0–100)
  - AI calculates a Roofing Lead Score based on:
    - Problem type (emergency > planned)
    - Homeownership status
    - Insurance vs cash
    - Zip code value / area quality
    - Job size potential
  - Stores score in custom field: Lead Score (0–100).
9. Smart Notes + Action Items
  - After each call, AI generates:
    - Short summary
    - Key details (issue, location, urgency, roof type)
    - Action item (appointment booked, callback needed, estimate required)
    - Reason for lead score
    - Insurance info, if discussed
  - Saved into Contact > Notes and/or Custom fields in GHL.
10. Duplicate Lead Prevention
  - On every call:
    - Check if phone exists in GHL.
    - If yes → update existing contact & tag as “Re-engaged Lead”.
    - If no → create new contact.
11. Micro-Analytics / Daily KPIs
  - At minimum, be able to generate daily counts via GHL dashboards:
    - Total calls handled
    - Answered vs missed

- 
- Qualified vs non-qualified
  - Appointments booked
  - Live transfers attempted & completed
  - Top call reasons (optional)
12. Tone Mirroring
- AI adapts tone:
    - Emergency situation → more urgent and reassuring.
    - Calm inquiry → relaxed but professional.
13. Fraud / Spam Filter
- AI flags spam:
    - Telemarketers
    - Vendors selling services
    - Wrong numbers
  - Tags contact as Spam / Non-Revenue.
14. Geo-Fencing (Service Area Check)
- AI checks address / zip code against client's service area list.
  - If outside area:
    - Log anyway; tag Outside Service Area.
  - If inside area:
    - Proceed to full qualification & booking.
- 

## 3. Tech Stack & Resources

Primary platform: GoHighLevel (GHL)

### 3.1 Core Platforms

- GoHighLevel (Primary brain)
  - Phone (optional), CRM, pipelines, tags, workflows, calendars, SMS/email, dashboards.
- OpenAI API
  - Conversation engine, structured JSON output (lead data, notes, scores).
- Telephony
  - Option A: GHL Phone (simpler, all-in-one).
  - Option B: Twilio (preferred for advanced routing & live transfer).
- Backend (Logic Layer)
  - Option A: No-code (n8n / Make.com / Zapier)

- 
- Option B: Light backend in Node.js (Vercel / Railway) or Python (FastAPI).

### 3.2 External Resources (Where to get what)

- OpenAI: [platform.openai.com](https://platform.openai.com)
  - GoHighLevel: [app.gohighlevel.com](https://app.gohighlevel.com)
  - Twilio: [twilio.com](https://www.twilio.com) (buy phone numbers, manage call flows)
  - No-code automation: [n8n.io](https://n8n.io), [make.com](https://make.com), [zapier.com](https://zapier.com)
  - Hosting (if building backend): [vercel.com](https://vercel.com), [railway.app](https://railway.app), [render.com](https://render.com)
  - Developers (if needed): Upwork, Fiverr, Toptal, LinkedIn (search: "GoHighLevel integrator", "Twilio developer", "OpenAI developer", "Node.js API").
- 

## 4. Work Plan & Timeline (For the Team)

Owner roles you can assign:

- Product Owner: You / PM
- GHL Specialist: sets up CRM, pipelines, calendars, workflows
- Backend Dev: API, Twilio, OpenAI integration
- AI Prompt Engineer: scripts, prompts, lead scoring logic
- QA / VA: test calls, data checking, feedback
